

Course: Database Administration

Lecturer: Mr. Thear Sophal

Week 7 – Practical Session

Storage and Indexing

Group Discussion and Presentation

1. Work in Group
2. Discuss and make a presentation the following **topics**:
 - **What are the different types of indexes available in MySQL, and how do they impact query performance?**
 - Cover primary key indexes, unique indexes, regular indexes, full-text indexes, composite indexes. (as detailed as possible)
 - **What are the advantages and disadvantages of using data compression and encryption in MySQL?**
 - Discuss performance implications, security benefits, and storage space considerations. (as detailed as possible)
 - **How does MySQL handle large object storage (BLOBs and CLOBs), and what are the best practices for managing them?**
 - Explore the performance implications and strategies for storing and retrieving large binary or text data. (as detailed as possible)
 - **What is the difference between clustered and non-clustered indexes, and how do they impact data retrieval?**

- o Compare clustered indexes (where the table data is stored in the index) with non-clustered indexes. (as detailed as possible)
